LED filament bulb with E27 socket, that combines a classical design with LED technology's many advantages. The LED bulb has a low energy consumption and a long service life and casts a very warm light.

Compared to an ordinary LED bulb, the advantage of an LED filament bulb is that it sends light around the entire 360 degrees whereas a regular LED bulb often has a directional light.

In addition, the LED filament bulb has a beautiful look that means that many choose this type if the bulb needs to be very clear and thus form part of the light design.
