# IP SERIES

IP means International Protection and is used in connection with the material's protection class. IP is stated with 2 numbers (e.g. IP20) to say how safe the material is in connection with water penetration and the penetration of dust and solid objects. Materials are divided into protection classes that state – partly the protection of the material itself against penetration of foreign objects and water – and partly the protection of people who touch dangerous parts. The first number always states the degree of protection against foreign objects penetrating the material, but at the same time it states a certain smallest degree of protection of people who touch dangerous parts. The second number states the degree of protection from water penetrating the material.
