AVER 30

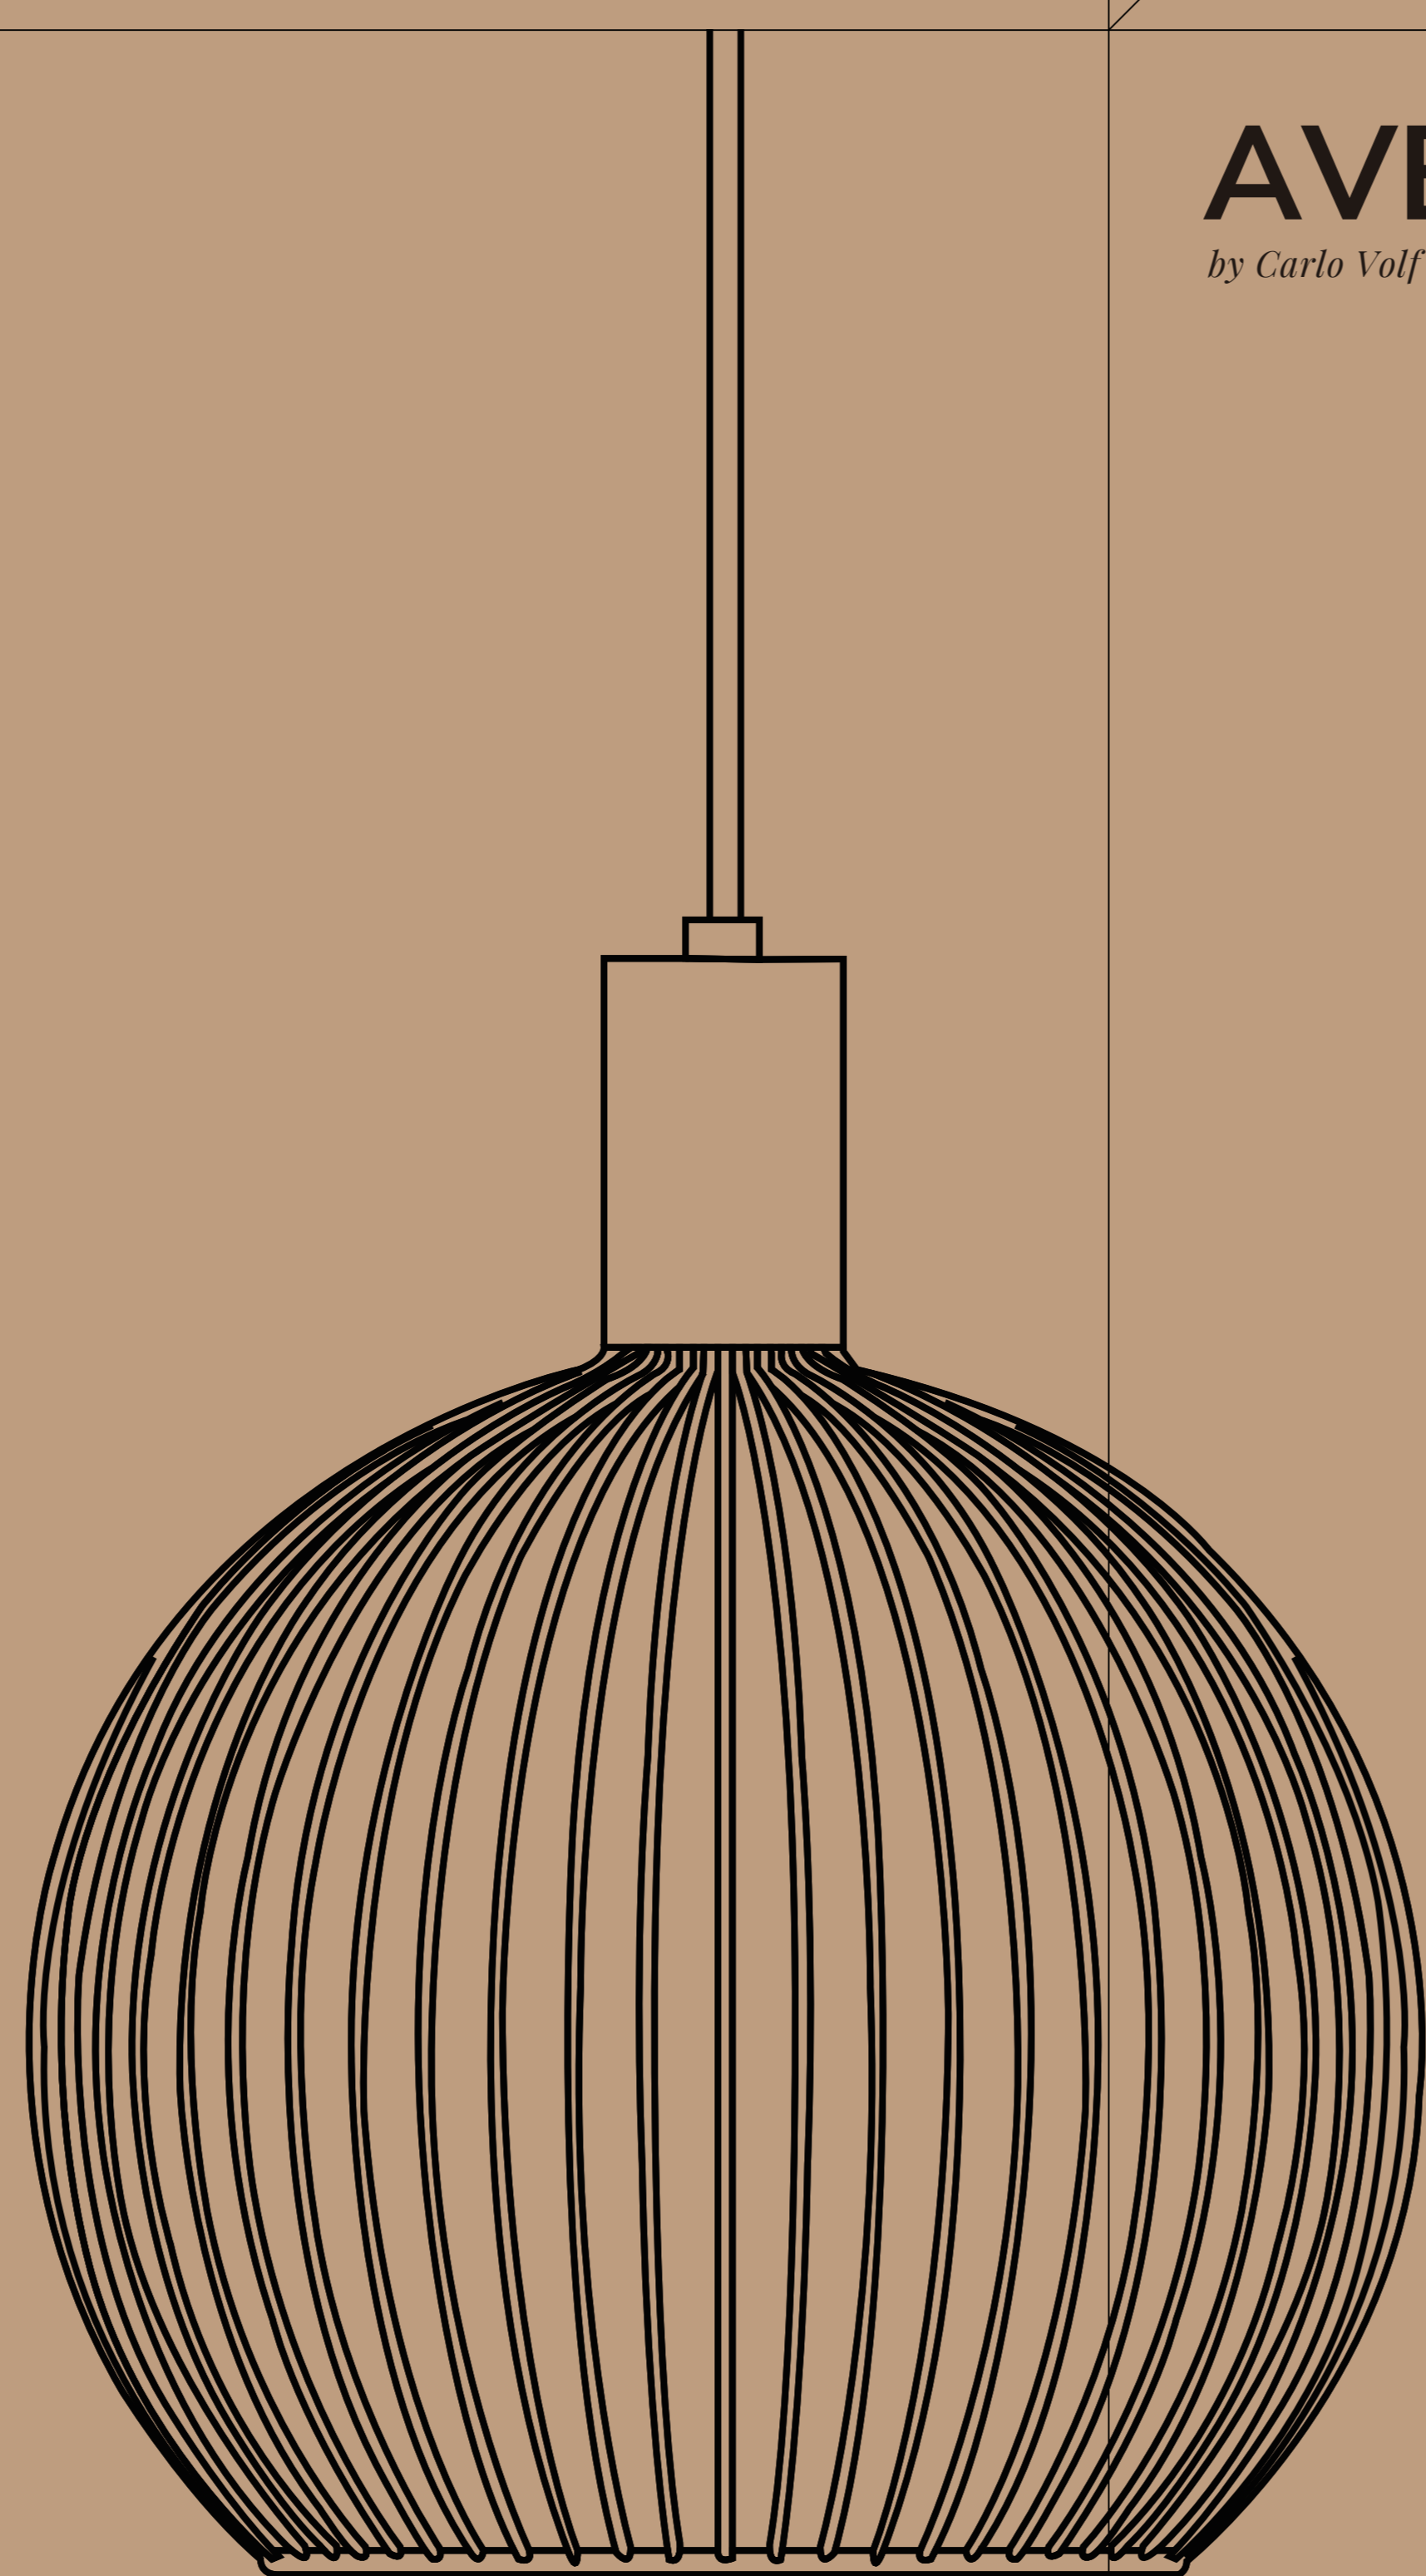

by Carlo Volf

Carlo Volf has been in the field of architecture since 1997. As a member of Carpenters Autumn Exhibition and The Daylight Academy, his work spans the fields of architectural planning, lighting and furniture. For decades he has been focusing on planning of daylight and artificial lighting.

"Planning good lighting is a process of giving control back to the light. When the light takes command, all I can do is simply to follow" says Carlo Volf, MAA.

Carlo Volf's works are often minimalistic design solutions based on simple and beautiful materials. He is driven by a devotion to create good lighting designs with a balance between light and darkness – between what is lit and what is not – and essentially between what is important and what is not.

Since 1995 he has won several international design prizes and has been nominated for the Danish Design Award 2021.
